

## **CHAPTER V**

### **CONCLUSION AND SUGGESTION**

This chapter presents the conclusions drawn from the findings and suggestions.

#### **A. Conclusion**

Based on the result of research finding and discussion, the researcher concluded that the students' writing ability on analytical exposition and their involvement in the class could be improved by using Self Regulated Strategy Development. The procedure of this research are: 1) For the preliminary observation the researcher gives test for students to make an analytical exposition, 2) The first meeting in cycle 1 was conducted the first step of Self Regulated Strategy Development that is develop kackground knowledge by giving some explanation about analytical exposition and correting the result of preliminary test, and the researcher conducted discussion and modeling as the second and the third step in this strategy, here the researcher make e konsep and dealing when, where and how this strategy is conduct. 3) The third meeting the researcher gives instruction for the students to make an evaluation list of students' mistakes when made an analytical exposition in the preliminary observation, then here the students must be memorizing the evaluation list and plan to make a good text as a next step of this strategy, 4) Then the last meeting of cycle 1 the researcher

gives support for the students and gives a solo test to make an analytical exposition as the last step in this strategy. 5) Here was the first meeting in cycle 2, the researcher gives the explanation about analytical exposition for the students and give some different example than cycle 1, 6) The next step of this strategy the students make a group and every group discussing about their problem when make a text and their solve the problem with their partner in their group, then every group must be made and analytical exposition and presented the result in front of the class to improve the students understand about how to make a good analytical exposition. 7) The last step of cycle 2 the researcher gives a solo test, and the differences between test in cycle 1 is here the students' free to choose themes when made an analytical exposition. The improvement was showed from the students' test result from preliminary study to cycle one, and cycle one to cycle two. Their progress was not only can be seen from their writing score, it also can be seen from their motivations during the process of teaching and learning.

They were interested during teaching and learning process in writing analytical exposition by using Self Regulated Strategy Development. It made the students' enjoy and comfort to study English. It also helped the students more active and creative to increase their imagination, so they could write an analytical exposition more enjoy and easily.

## **B. Suggestion**

Based on the conclusion above, the researcher would like to give some suggestions to improve the students' writing ability by using Self Regulated Strategy Development.

The suggestions showed as follows:

First the researcher would like to give the suggestion for the teacher, Self Regulated Strategy Development was recommended to use in teaching and learning process especially in writing skill. Because, this strategy was effective to solve the students problem in writing of analytical exposition was also effective to make students do not feel bored the class.

For the second suggestion, it is suggested for English students to use this strategy to improve their English ability on writing ability. This is because this strategy suitable for the students in senior high school. Beside of that this strategy has clear steps, they are: develop background knowledge, discussion, modeling, memorizing, supporting and write independently.

The last suggestion is intended for the next researcher. They are suggested to do some follow up research by using Self Regulated Strategy Development to improve writing ability. This research study can be used as reference. The next researcher should find the weakness and the strength of this research. So that they could conduct better research and could find out more advantage of Self Regulated Strategy Development.
