

CHAPTER VI

CONCLUSION AND SUGGESTION

This chapter presents conclusion of the findings related to study about students's perception on the target need, and students' perception on learning need. Finally, based on the finding and discussion from chapter IV and V the writer gets conclusion as follow:

A. Conclusion

The result based on the research on mathematics students perception on their learning need in English at IAIN Tulungagung. Mathematics students mostly take the course because of their obligation. During the learning and teaching process they found their lack was in translating and understanding the vocabularies. From this course, they hope to increase their language skill and help their self in understanding mathematics references written in English. The students reveal that they prefers to use game and AVAs during learning process rather than lecturing or students presentation. Beside that they also hope the course will be balance between theory and practice to avoid the boredom.

During the learning and teaching process, the stated that the lecturer was mastering and explain the material well. But they haven't show the enthusiasm well. They also reveal that the environment was good enough to support the learning and teaching process.

B. Suggestion

1. English Lecturer

The writer suggest that the English lecturer should develop appropriate strategies and AVAs that use to mathematics students in English teaching and learning process. So that the lecturer must be enrich their creativity in creating teaching media in order to attract students interest and make successfully process learning and teaching both students and lecturer.

2. Mathematic students

The writer suggest for students to give attention and follow the lecturer instruction during learning and teaching process in the classroom, so the strategies and also media can be more effective. Beside that they should also increase their interest in learning English.

3. Future Researcher

For the future researcher, the present study focuses on the descriptive study that the study learning need to mathematics students at IAIN Tulungagung. The future researcher can conduct the same study focus on the impact of learning need toward learning strategies of mathematics students of IAIN Tulungagung.
