Subject: Letter of Acceptance

Dear Sokip, et. al.

I am pleased to write this letter of acceptance to you for the research entitled "Character Building in Islamic Society: A Case Study of Muslim Families in Tulungagung, East Java Indonesia". Your paper is scheduled to be published on the first issue of 2020 (Vol. 10, issue:2) of Journal of Social Studies Education Research (June, 2019). The paper will be open access and available online at the website of the journal in June, 2019. Best regards,

07.05.2019

Assoc. Prof. Bulent Tarman

Editor-in-Chief,

Journal of Social Studies Education Research (JSSER) btarman@gmail.com

P. Paring

[JSSER] Editor Decision

Fair

Findings:

Mr. Sokip Sokip: We have reached a decision regarding your submission to Journal of Social Studies Education Research, "Character Building in Islamic Society: A Case Study of Muslim Families in Tulungagung, East Java, Indonesia". Our decision is to: "accept submission." Please find the comments given below. Although it is accepted, please make sure to use APA 6 edition throughout the manuscript. It is also highly recommended to cite most recent references relevant to this study. Please expect to get further instructions to follow in the near future for the publication procedure. Best regards, Bulent Tarman, Ph.D Editor-in-Chief, JSSER Reviewer A: Relevance of the title with content: Good Type of manuscript (Research, Lit. review etc.): Research Quality of the work: Good Theoretical Framework: Good Objectives and Rationale: Good Method:

Note for A	Author/s: ttention to guidelines and suggestion to improve the quality of the

cintent

Reviewer B:

Please address following corrections/suggestions to make this article better for publication.

- 1- How does the study contribute to the body of knowledge in the field of education?
- 2- What are the theoretical and practical implications of the study?
- 3-Results must be clearly explained and discussion section needs alignment with the previous research,
- 4- Expand the references with current research studies
- 5- It is necessary to stay consistent with (a) what is known already in the literature (b) what needs to be investigated (c) why its important (d) and how you're going to do it. The idea of this paper was interesting, however it did not have enough data or proper methodology to address the research question.

Article Title (Size 12; Bold; Times New Roman)

Dear Sokip

Please use this template to convert your paper for the use of copyediting. Do not change the format of this template.

First Author's first name and last name¹& Second Author's First and Last Name² (Add other authors names if there are more)

Abstract (English; Size 11; Bold; Times New Roman)

Abstract must be 300 words length maximum. All text must be single spaced (except for the title), line spacing, justified size-11, Times New Roman. Abstract should be comprised of brief, comprehensive summary of the contents of the article. It should include the aim and the scope of the study, the method used, brief summary of the findings, conclusion and implications. Please use this template you downloaded to submit your manuscript.

Key words: Use maximum 5 key words; use comma (,) following each key word. (Example: Social Studies Education, Active citizenship, program development). The key words should reflect the content of the study.

Introduction

All text must be 1.5 spaced (except for the title), line spacing, justified size-12, Times New Roman. The specific problem under study, how it relates to previous work, why and how it is different and how it will contribute to the field should be explained in this section. The arguments and discussion should be grounded on relevant evidence from review of literature. The need that the study intends to meet should be stated clearly by providing evidence from previous research in the field. At the end of the Introduction, the aims of the study should be explained clearly as questions or hypotheses. Sub-headings can be used in this section if needed.

Method

-

 $^{^{1}}Title\ of\ the author,\ affiliated institution, email address$

²Title of the author, affiliated institution, email address

The following sub-headings should be used in this section.

Research Design

Research model and the reason why a specific model is chosen should be specified in this section. Research model should be explained with relevant literature. Also, research design should be explained in detail.

Population and Sample/ Study Group/Participants

Choose one of the above depending on the nature of the study. Quantitative studies should contain detailed and clear information regarding the population of the study, the sample and the sampling method. Relevant characteristics of the sample should be stated.

In qualitative studies, *study group* should be preferred instead of *sample* since such studies are conducted with few individuals or units. The individuals or units forming the study group should be introduced with all relevant characteristics. Information regarding the context of the study group should also be explained here.

Data Collection Tools

Data collection tools that are utilized for the study should be stated in this section. Each tool should be introduced by describing its features and explaining the reasons for choosing it while providing information regarding reliability and validity issues.

Data Collection

Information regarding how, when and under which conditions data collection tools are used should be explained here. If it is an experimental research, the experiment or the manipulation conducted should be explained in detail. The procedures applied not only on the experimental group(s) but also on the control group(s) should be explained.

Data Analysis

For quantitative studies, analysis procedure(s) and the statistical methods used and their justification for appropriateness for each research question or hypothesis should be explained in

detail in this section. Data analysis procedures in qualitative studies should also be discussed comprehensively.

Findings

The findings obtained from data analyses should be presented in line with the aims of the study. Tables and figures can be used to display the results of the analyses. Findings section should deal only with presenting the results and should not include the discussion of the findings. Subheadings in line with sub-goals of the study can be used. Sub-headings should be flush left, in italics and with each word capitalized.

Discussion, Conclusion and Implications

This section should include the discussion of the findings. First, the research question or the hypothesis should be re-stated and related findings should be summarized briefly. Then, the findings should be discussed referring to relevant results in previous research. If the study indicates different findings from the ones in literature, possible reasons should be elaborated. Finally, the possible reasons for the findings should be interpreted based on evidence. The following points should be considered in discussion:

- Overgeneralization should be avoided and the discussion should evolve only around the findings of the study.
- When providing possible reasons for the findings, all possible factors should be considered and discussed from a wide perspective.
- Possible error sources (statistical, measurement errors, etc.) should be explained.
- The language in this section should not have a certain unquestioning tone, rather; the tone should be non-conclusive giving room to other possibilities.

The discussion section should be organized in parallel with the order of the aims of the study.

At the end of this section, the result(s) obtained in the study should be re-stated and related implications should be explained. Implications should be based on and limited to the findings of the study.

Tables and Figures

Appendix

Appendices should be added following the References section.

References

References should be cited in the text as name and year and listed at the end of the paper alphabetically. Where reference is made to more than one work by the same author published in the same year, identify each citation in the text as follows: (Tarman, 2016a), (Tarman, 2016b). Where three or more authors are listed in the reference list, please cite in the text as (Tarman et al., 2012). All references must be complete and correct. If essential, cite unpublished or personal work in the text but do not include it in the reference list. Where possible the DOI for the reference should be included at the end of the reference. Online citations should include date of access. References should be listed in the following style:

In-text citation

Character Building in Islamic Society: A Case Study of Muslim Families in Tulungagung, East Java, Indonesia

Sokip¹, Akhyak², Soim,³ Ahmad Tanzeh⁴ & Kojin⁵

Abstract

This study seeks to identify the position, goals, and role of parents in Tulungagung, East Java, Indonesia with regards to character building. It takes the form of descriptive-qualitative research and employs data triangulation during data collection. The data analysis involved organizing data and sorting it into manageable units that could be managed, synthesized, and searched to find out what was important and useful to convey. It was found that parents need the necessary skills to educate their children to have a good personality, with the goal of this character building being to create well-rounded adults who will make good citizens. It was further found that parents play an important role in influencing a child to adopt an Islamic character in life. This study adds to the existing knowledge by showing how the integration of Islamic and global values can, when parents have the necessary skills, build characters for adults who are pious (*salihah*), good servants of Allah, and responsible for their thought and speech according to Islam while also being honorable, creative, tolerant, hardworking, responsible, trustworthy, respectful of nature, disciplined, brave, efficient, effective, diligent, skillful, helpful, consistent, and affectionate to other human beings, as well as being able to make shared decisions.

Key-words: character building, global era, Islamic perspectives, parent reeducation, education.

Introduction

Character building in the Islamic world does not always yield optimal results, as evidenced by the widespread social behaviors that indicate a lack of character in many Muslim countries. Bandial (2011), for example, expressed in *The Brunei Times*:

Statistics from the Royal Brunei Police Force (RBPF) showed that in 2009, 126 offenders aged 18 and under were arrested for a variety of offences including assault, theft and vandalism. The latest figures from RBPF also showed that between January and March

⁵ Associate Professor, State Islamic Istitute of Tulungagung, Indonesia; khozin.mashudi@yahoo.com

2010, 39 minors were arrested in a three-month period, a 19 per cent increase from the same time period in the previous year (Bandial, 2011).

For Qatar, Winslow (2013) wrote that according to INTERPOL data, the murder rate increased from 1.52 to 2.11 per 100,000 people between 1995 and 1999, an increase of 38.8 percent. The incidence of rape decreased from 5.23 to 1.72, a decrease of 67.1 percent, while the rate of robbery increased from .67 to 1.34, an increase of 100 percent. The rate for aggravated assault increased from 4.05 to 7.09, an increase of 75.1 percent, while the burglary rate decreased from 58.18 to 34.10, a decrease of 41.4 percent. The rate of larceny increased from 78.58 to 136.01, an increase of 73.1 percent. The rate of motor vehicle theft increased from 10.12 to 11.49, an increase of 13.5%. The rate of total offenses increased from 158.35 to 193.86 per 100,000 people, an increase of 22.4 percent, with larceny accounting for the bulk of this increase (Winslow, 2013).

The problem of violent youth groups has escalated in Indonesia following economic recession, unemployment, and weakened state institutions. Young people have been affected by a lack of income and broken expectations. Consequently, youth gangs have emerged and sought to generate economic revenue for their members, as well as create identity and confidence. Drianyanto (2011) expresses how juvenile delinquency in Indonesia has led to many underage children becoming smokers, using narcotics, engaging in casual sex, and committing crimes. He adds that the more violent activities, including murder, are often related to drugs and/or gangs, and he mentions media reports of female gangs clashing in high school (Drianyanto, 2011).

Muslims can feel a little proud, however, because Egypt seems to have succeeded in character building. Souryal's (1992) research, which was published in the *International Journal of Comparative and Applied Criminal Justice* and entitled *Juvenile Delinquency in the Cross-Cultural Context: The Egyptian Experience*, describes this. He expresses how juvenile delinquency in Egypt remains remarkably benign and relatively stable. He attributes this to three main factors: (a) an orthodox religion-based value system where the daily moral behavior of juveniles is heavily influenced by Islamic institutions; (b) a family structure that is closely connected and where children are routinely taught how to behave in a socially acceptable manner and shamed if they commit a crime; (c) a progressive juvenile justice system that rather than treating delinquency as a crime, regards it as a social phenomenon instead (Souryal, 1992).

In Turkey, whose most cohesive and lively population takes part in pilgrimage, character-building education issues have apparently received enough attention through youth education (Bailleau & Cartuyvels, 2011). In the U.S.A., Lickona (1992) identified 10 signs of moral degradation that could damage the character of the nation. He states that a number of factors have adversely affected young people, and there is a new impetus to revive character education. These factors include poor parenting (even in unbroken families); inappropriate adult role models; mass media's portrayal of materialism, sex, and violence; and peer pressure. He adds that the effects of this unfriendly environment on youth character can be seen in 10 areas, namely increasing youth violence; mounting disrespect for authority; growing dishonesty (e.g., cheating, lying, and stealing); cruelty to peers; bigotry within schools, starting in preschool and continuing through to higher education; sex at earlier ages; dropping work ethics; an increasing selfishness and declining regard for civic responsibility; more self-destructive behavior; and a lack of ethical competence (Lickona, 1992).

Important research into the importance of character education has been published by the Character Education Partnership. The results of a study by Berkowitz (2012) from the University of Missouri–St. Louis showed that the motivation of school students increased in schools with character education. Indeed, those classes that were thoroughly engaged in character education saw negative student behavior, which would normally affect academic progress, drop significantly (Berkowitz, 2012).

Literature Review

The term "Character Education"

The implementation of character education for students in Islamic countries is still a thorny issue, with it often being a formality, normative, stuck in superficiality, lacking priority for substantial aspects, and overlooking the depth and meaning of students' lives. Based on this, educators around the world are starting to realize that the study of moral education needs to be revived. Three considerations underline the importance of a moral education: i) weak family ties; ii) the negative tendencies in modern teenagers' lives; and iii) a revival of the need for ethical values, morals, and manners in modern times (Nurul Zuriah, 2007).

Malaysia has also experienced many problems related to character education. Jeremah (2012) explains that violent crime rates in Malaysia are reaching worrying levels. In practice, Malaysia seems serious about strengthening character education through Islamic and moral education.

Balakrishnan (2010) states that moral education is a compulsory formal subject in the Malaysian school system. This is taught to non-Muslim pupils, while Muslim pupils are taught Islamic Education. The pupils study this subject from their first year of primary/elementary school to form five in high school (about age 17), culminating with a formal centralized public examination conducted at the end of form five by the Examination Board of the Ministry of Education (Balakrishnan, 2010).

The general aim of moral education (ME) is to develop individuals with good characters, so they will be responsible and contribute to harmony and stability in the nation, as well as global society. The main objectives are to enable pupils to (i) understand and internalize the noble values necessary for good character, (ii) learn and accept the importance of harmony between people and the environment and strive to sustain it, (iii) enhance understanding and cooperation by sustaining a peaceful and harmonious life in a democratic Malaysia, (iv) develop mature thinking based on moral and spiritual values to be used when making moral decisions and solving problems, (v) develop a commitment to act morally based on justice and altruism in line with the noble values of Malaysian society (Ministry of Education, 2000).

Based on the above descriptions, parents who pay more attention to the future of the coming generations are certainly concerned about the current condition of child morality. Moral decadence has occurred in Muslim countries, and it is the responsibility of all Muslims in the world to correct this, especially parents as family educators, teachers as school educators, and other scholars as educators in society.

The term *character education* is simply the current term for a millennia-old concept. For our purposes here, we define it as the deliberate development, usually in schools, of young people's tendency and capacity to be responsible, social, and respectful democratic citizens in society. Character education is by nature complex—it truly is like rocket science. Developing a varied set of psychological character components (e.g., conscience, empathy, moral reasoning, values, moral identity, etc.) requires a diverse and multi-faceted implementation strategy. At its most molecular level, character education entails building a network of positive pro-social relationships (e.g., among students, among staff, between staff and students, between staff and parents, between administrators and staff, and so on). At a more macro level, it involves comprehensive school reform and encompasses all aspects of a school's functioning, from its

academic curricula to its disciplinary policies, from its mission statement to its governance structures, the adult culture of the school, and so on (Berkowitz, 2012).

Character (akhlaq) is a set of internal states, traits, qualities, and abilities that individuals' possess, leading them to behave without thought and deliberation having developed into habits whose values lay in the teachings of Islam. It includes both inward qualities and outward human behavior, and it is based on the view that behaviors are closely related to the soul and its intentions. Aside from the home, school is another significant place where character can be inculcated (Izfanna & Hisyam, 2012).

Character education seeks to develop virtue, or human excellence, as the foundation of a purposeful, productive, and fulfilling life and a just, compassionate, and flourishing society. Character education takes deliberate steps to cultivate moral and intellectual virtues through every phase of school life, such as the example set by adults, the relationships among peers, the handling of discipline, the resolution of conflicts, the content of the curriculum, the instruction process, the rigor of academic standards, the environment of the school, the conduct in extracurricular activities, and the involvement of parents. Everything that happens in a school is a form of character education, because everything affects character.⁶

Thomas Lickona (1992), author of Educating for Character, states: "Moral education is not a new idea. It is, in fact, as old as education itself. Down through history, in countries all over the world, education has had two great goals: to help young people become smart and to help them become good." Good character is not formed automatically but rather developed over time through a sustained process of teaching, setting examples, learning, and practicing (i.e., character education). The deliberate teaching of good character is particularly important in today's society because the youth face many opportunities and dangers that were unbeknown to earlier generations. Character education encompasses a broad range of concepts, such as a positive school culture, moral education, just communities, caring school communities, social emotional learning, positive youth development, civic education, and service learning. All of these approaches promote the intellectual, social, emotional, and ethical development of young people and encourage them to share a commitment, thus helping young people become responsible, caring, and contributive citizens (Lickona, 1991).

⁶ See http://www.gobookee.net/character-education.

Character building in the global era

In the current global era, Muslims need a strong handle, so they can select and sort the many values they are offered. In general, there have been three educational focuses, namely to build knowledge, skills, and character. Education in Muslim countries has apparently been successful enough in building knowledge and skills, but it still fails to build character. Based on this situation, it can be said that comprehensively realizing character education in Muslim countries is needed. This should be oriented to the strong philosophical foundation of Islamic principles, strong educational management, educational democracy and empowerment, the preparation of qualified and professional educational human resources, and quality, as well as character-based education development.

The above new educational paradigm indicates that the responsibility for giving an education is no longer merely that of school leaders. In fact, control has been given back to the community in that schools and communities have the same responsibilities and deliver education together hand in hand. Character education is the intentional effort to develop in young people core ethical and performance values that are widely affirmed across all cultures. To be effective, character education must include all the stakeholders in a school's community and must permeate the school's climate and curriculum (DeRoche, 2000).

Azra (2000) has put forward the thought that Islamic education—whether in school, in the family, or in society—should be interconnected and harmoniously cooperate, as well as be a common step in the educational process of students. All of these three things should complement each other and support each other in achieving the goals of an Islamic education that truly forms individual students according to the teachings of Islam (Azra, 2000).

Failed character development in the education of Muslim countries has arisen due to a lack of an optimal focus. Josephson (2006) states that the need for character education in school settings becomes more apparent with the passing of each day. Young people almost unanimously say that ethics and character are important on both a personal level and in business, but they express very cynical attitudes about whether a person can be ethical and still succeed (Josephson, 2006).

When reforming character education in Muslim countries, an important factor we need to consider is the need to build commitment within the Muslim community. Without a strong commitment to a character-education program, we will have difficulties implementing it. The teaching of Islamic education should not just focus on theoretical aspects but also emphasize

the practical application of Islamic knowledge (Tamuri et al., 2013). A teacher of Islamic education needs to educate and develop students' character by infusing them with knowledge, providing supportive conditions and environment, and then giving chances to practice and form character (Izfanna & Hisyam, 2012). Character development requires behavioral change as well as knowledge acquisition, and incorporating such behavioral change into university administrator preparation programs requires a faculty to consider recent findings in neuroscience on how the brain learns and then incorporate these findings into program design and instruction (Calabrese & Roberts, 2002).

Muslims need to build an earnest commitment to conduct Islamic character education around the world. Starting from the paradigm of Becker et al. (2012), which is embodied in the document *Building Character Education in Your Community: A Resource Guide for Communities*, it is time for Muslims around the world to promptly implement a macro-level character-education movement. It should begin with (i) determining who must be involved to gain the commitment needed to begin the character-education initiative and (ii) determining the community's needs. These needs could be determined through (i) focus groups, (ii) surveys, and (iii) one-on-one interviews. A coalition including key community leaders could then be built by considering using an existing network focused on community needs and/or forming a new coalition with character education as its primary mission (Becker et al., 2012).

In America, The Character Education Partnership (CEP) is a national organization for the advancement of character education. It provides the following eleven principles of character education:

- Effective character education promotes core ethical values as well as supportive performance values as the foundation of good character.
- Effective character education comprehensively defines "character" as including thinking, feeling, and behaving.
- Effective character education uses a comprehensive, intentional, and proactive approach to character development.
- Effective character education creates a caring school community.
- Effective character education provides students with opportunities for moral action.

- Effective character education includes a meaningful and challenging academic curriculum that respects all learners, develops their character, and helps them to succeed.
- Effective character education strives to develop students' self-motivation.
- Effective character education engages the school staff as learning and moral community that shares responsibility for character education and attempts to adhere to the same core values that guide the education of the students.
- Effective character education fosters shared leadership and long-range support of the character education initiative.
- Effective character education engages families and community members as partners in the character-building effort.
- Effective character education assesses the character of the school, the school staff's functioning as character educators, and the extent to which students manifest good character (Eleven Principles of Character Education, 2004).

These eleven principles provide guidance for local school districts as they begin to develop their character-education programs. The *Character Education Quality Standards* self-assessment tool is used in this study to quantify the overall effectiveness, or lack thereof, of a character-education program. Character education includes a broad range of concepts, such as a positive school culture, moral education, a just community, a caring school environment, social emotional learning, positive youth development, civic education, and service learning. All of these promote the intellectual, social, emotional, and ethical development of young people and express a commitment to help young people become responsible, caring, and contributing citizens (Lickona, 1991). But which virtues are most important for a strong character? Here are ten that are recognized and taught by nearly all philosophical, religious, and cultural traditions: (i) wisdom, (ii) justice, (iii) fortitude, (iv) self-control, (v) love, (vi) positive attitude, (vii) hard work, (viii) integrity, (ix) gratitude, and (x) humility (Lickona, 1991).

Character education from an Islamic perspective

The character education of learners becomes a task that must be done seriously, systematically, and in a programmed manner due to its interconnection with the lives of children. Kupperman (2005) states that character (or moral) education is "a complicated business" (Kupperman, 2005,

p. 216). A character-education program needs to develop moral literacy in teachers and showcase effective methods for integrating moral literacy across existing curricula (Zdenek & Schochor, 2007). Character education has existed since ancient times, but the primary task of an educator is to optimize this character education in order to succeed. The character-education movement in the United States, for example, has been around since the first years of the 21st century, and there is actually an awareness movement among educators, as revealed by Elkind and Sweet (2004) in their article *Character education is not new*. It was in fact included as an important objective for the first U.S. public schools. It is even legislatively mandated or at least encouraged in most states. In reality, the current movement is simply a reminder of education's long history of stressing core values—such as respect, integrity, and working hard—to help students become creative, capable people and good citizens. Character education provides effective solutions to ethical and academic issues that are of growing concern (Elkind & Sweet, 2004).

From the Islamic perspective, *Aqidah* can establish and oversee the actions and human behavior that stem from the formation of the self, the family, and community life. If people are aware of the responsibility of what must be done, they will not become involved in unhelpful, harmful, or sinful behavior. The faith within themselves will yield positive results, because they will always feel the presence of *Allah*, the most well-known of human deeds. With faith, human beings tend to do good deeds in line with Islamic values. Islamic *Aqidah* enables human beings to think openly, oversee the future, and be optimistic about life. The nature of the here and now and what will come later makes human beings able to consider the future and take actions for the present and the future in a balanced manner. All actions, behaviors, and deeds are therefore confidently performed based on the principles of *Aqidah* and acceptance of all *Allah's* revelations. This establishes a harmonious community and secures it. It encourages people to respect other people's rights, whether they be family members, neighbors, guests, or whomever. This also educates human beings to mutually respect one another and be mutually affectionate (Fatmi, Hidayat, Huzairi, Bahti & Ahmad, 2010).

Islam views manners, morality, and a religious soul education as always being needed for children and learners and therefore takes them seriously. Ibn Miskawayh (n.d.) suggests that character is original and can be changed slowly or quickly. He rejects the opinion that character cannot be changed, because if it cannot be changed, the power or differentiation in power

(tamyiz) and thinking (al 'aql) will not be considered, so all forms of norms, guidance, and education will have no benefits. Human beings would therefore become wild and uncontrolled (Miskawayh, n.d.). Changes in human character occur on several levels, as can be seen in how children grow and develop from birth. Among children, some easily accept character improvement and education, while others reject them. These are often hardheaded, covetous, and envious of others. If such characteristics are ignored and not corrected, children will tend to act in accordance with their natural tendencies. Education prompts further thinking about that nature, so these human beings will be educated. Maskawaih argues that newborn babies are naturally good, not cruel, and without sin. Their thoughts are clean like a blank sheet of paper. Soon, however, they are influenced by their environment at certain levels (Jalaludin & Said, 1994).

When describing a method of education that is relevant to children, al Ghazali (1936) mentions practices and habituation. According to Maskawaih (n.d.), *Shariah* religion is a decisive factor for a straight character, because it accustoms people to perform commendable deeds and makes the soul ready to receive wisdom, so people can achieve happiness.

Changing the human character needs better systematic guidance and education. This can be achieved with knowledge of the human soul and an understanding of what the human soul was created for, including its real aims and its inherent power. If the soul is guided properly, human beings follow lofty and noble aims (Maskawaih, n.d.). Therefore, religious rules and the human soul are the main foundations of children's character education. Child education must be done in accordance with religious rules for correcting children's characters. If knowledge about the soul is not included in the process of childhood education, however, the effort will be worthless. This concept is mirrored in educational psychology by contemporary thinkers.

Methods

Research Design

This study is descriptive-qualitative research that involves data that was collected and expressed in the form of words and images and words arranged in sentences, such as the result of interviews between researchers and informants. The presence of the researcher is a measure of success or understanding in several cases. The researcher acted, with the help of other people, as the main instrument in collecting data from people in Tulungagung, East Java, Indonesia. This

research used a sampling technique commonly employed in qualitative research, namely purposive sampling, which was implemented using the chimney technique. Data were first collected broadly and then were narrowed down and focused based on the research. Over an eight-month period, this research was conducted in three areas of Tulungagung, East Java, Indonesia: (i) Kendal Gondang, (ii) Kutoanyar, and (iii) Mangunsari Kedungwaru Tulungagung.

Data and Sources of Data

The sources of data were classified into three groups: informants, documents, and places of evidence. In qualitative research, data sources are also divided into two groups, namely primary and secondary data. The primary data were obtained directly from parents in Tulungagung, East Java, Indonesia, while the secondary data had already been obtained by other parties. The roles and functions of these two data were mutually complementary and supportive. The techniques for the data collection were data triangulation, which involves combining various methods of data collection and in this case included (a) in-depth interviews, (b) participant observation, and (c) documentation.

Data-analysis techniques

The techniques for data analysis involved working with data, organizing data, sorting them into units that could be managed, synthesizing them, and then searching for what was important and deciding what would be of use for others. At this stage, the data analysis was performed and utilized in such a way to successfully derive the truths that could be used to answer the questions and issues raised in the study. An inductive method was used to manage the qualitative data of this study. The inductive method allows for set of specific facts to inform generalizations with common properties. This line of thought has been used to obtain an opinion consisting of several special opinions. By connecting these opinions, the researchers generalized them.

Checking the validity of data

The validity of the data in this study was determined using the criteria of credibility (degree of confidence). The credibility of the data was intended to prove that the data accorded with the reality that exists in the study. To establish the validity of the data, the researcher used the inspection technique as follows: 1) The extended research participation allowed an increased

degree of confidence in the data collected. With extended participation, the researcher could examine the accuracy of information introduced by distortion and build confidence in the subject. Therefore, a limited participation was not performed in a short time. Instead, the researcher extended the participation that took place on the study background. 2) Perseverance observations meant that the researchers found the characteristics and elements in situations that were very relevant to the issue being studied and then concentrated on such matters in detail. 3) Triangulation helped data checking by comparing it with something else. This involved a significant source of triangulation to compare and check that the degree of confidence in information gained over time with different tools. This involved (a) comparing the observed data with the interview data; (b) comparing what people say in public with what they say in private; (c) comparing the state and perspective of someone with different opinions and the views of the principal, teachers, students, guardians, and chairman of the Board of Education; and (d) comparing what people say about the research situation with what they have said previously.

Results and Discussion

Parents teaching good character to their children

Parents need to have optimal skills to educate their children about having a good character. It is therefore important for parents to have a mastery of educational methodology and the appropriate materials, as well as the ability to provide guidance, direction, and motivation. Parents first need to look inwards and decide whether they themselves are mature in their lives. If they find they are not, they need to engage in self-education by seeking out information from people with the capacity to educate young people, because parents themselves should have a mature character.

When educating themselves, parents should understand the indicators of personal maturity, such as having healthy thoughts and being able to be independent rather than relying on other people. They should be able to make decisions about their attitudes to life without hesitation while also considering others and accepting their views. They should be responsible for their attitudes, behaviors, and actions and be able to accept, give, and feel friendship and real affection. What is more, a mature person is able to balance emotion and intelligence in all aspects of physical and spiritual fulfillment and manifest it in his or her behavior. Indeed, mature people can balance their personal needs with the demands of society and their obligation to their chosen deity to

serve their social milieu. They should have a social conscience, which enables them to become mature, useful citizens in society (Hashim, 1983).

Our personalities result from an interaction between our genes and our social environments, so every person is unique with his or her own personality. Even when individuals have a similar genetic makeup and social environment, this interaction can produce widely different personalities. Ahmad (2012) states that the significance of personality development lies in producing a well-balanced person physically, spiritually, and mentally, so he or she can face challenges in any circumstances. Furthermore, in line with Mahmud (2000), Ahmad (2012) explains that the balanced growth of an individual should occur within the physical, mental, and spiritual being of the individual. Personality can therefore be developed through methods that correspond to those aspects, namely spiritual training (tarbiyah ruhiyyah), physical training (tarbiyah jismiyyah), and intellectual training (tarbiyah fikriyyah) (Ahmad, 2012).

In accordance with the demands of these fast-moving times, parents need reeducating in the broadest sense. Guidance and counseling, the delivery of information, and/or training is often needed for parents. Both developed and developing countries commonly implement non-formal adult education programs.

Adult education, in a specific and systematic form, seems to have been missed by education practitioners in Muslim countries, however. It is the researcher's belief that the paradigm of adult education should receive the attention of education researchers and practitioners. This should be studied and developed in order to develop more competence in character education for Muslim children. The concept of family education needs to be continuously reaffirmed, because family is the first and foremost institution for learners, namely children of today who live in an everchanging era.

The goal of character building for children

The goal of character building for children in Muslim families is to shape them into perfect adults who are pious (*salihah*), good servants of *Allah*, and responsible for their own thoughts and speech. They should also be honorable, creative, tolerant, hardworking, responsible, trustworthy, respectful of nature, and affectionate to other human beings. They should also be capable of making shared decisions and be disciplined, brave, efficient, effective, diligent and skillful, helpful, and consistent. In other words, they should be good citizens.

Maturity is a basic foundation and an aim of education, so if education is to succeed, it must be administered by a professional adult, because if they themselves have chosen norms and values and act with their own responsibility, their students will also become self-sufficient citizens when they become adults. We need to accept that the main goal of Islam is the establishment of a moral and character education that can develop people, both men and women, with clean souls, willpower, the right ideals, and a high degree of morality. Such people know the meaning of duty and respect human rights. They know the difference between good and bad and choose to avoid a reprehensible act because they know it would be disgraceful, instead remembering the supreme being in everything they do (al-Abrasyi, 1970).

In the modern context, efforts to educate children need to be conducted in the steady and creative environment of the Muslim family. Chauhan (1979) asserts the characteristics of a creative child:

1) Courageous in convictions: A creative child shows strong conviction in his or her beliefs and values, going beyond socially conformist behavior. 2) Curious: A creative child is eager to learn more and more about his environment. 3) Independent judgment: A creative child can judge crucial matters independently. 4) Independent thinking: A creative child thinks independently when faced with various problems. 5) A creative child becomes easily absorbed in tasks. 6) A creative child applies intuition in problem solving. 7) A creative child does not always accept the established solution to a problem and does not always conform. 8) A creative child is willing to take risks. 9) A creative child can develop a vision for future problems. (Chauhan, 1979)

In Muslim families, for parents as educators in the family, it is necessary to understand the concepts, tasks, functions, and properties of Muslim educators and how they seek to develop children into creative people. According to Tafsir (1992), Islamic educators are responsible for developing students by achieving their full potential, whether it be their affective, cognitive, or psychomotor potential (Tafsir, 1992).

The role of parents in character building

In relation to character building in the children of Muslim families, parents play important roles in influencing their children to develop good characters in life. Parental knowledge about the theory of Islamic education, Islamic guidance and counseling, developmental psychology, education, and personality is very important, especially in the daily education activities of a family.

Nichols (1974) proposed that there are three main factors that likely have an important influence on children's ability and school achievement: (a) the school or other education institution; (b) the family and other social influences; and (c) the child's genetic makeup. In addition, one might also want to consider nutritional factors, community influences, and so on (Nichols, 1974).

Nichols' theory insists on that the second factor (i.e., family and other social influences) greatly affects a child's ability. As it is effectively an informal educational institution, the family offers the first learning environment to a child. In this environment, children receive their first guidance from their parents. In reality, Islam positions Muhammad the last prophet and his apostles as exemplary Muslims for character education in children. Prophet Muhammad (peace and blessings be upon him) is an ideal role model for all of humanity. Among his various outstanding virtues and characteristics, he was an extraordinary husband, a perfect father, and a unique grandfather. He was also a great statesman, judge, and spiritual leader. His most distinctive quality, however, was the fact that he brought blessings to all in both words and deeds. He infused justice, love, and dignity in all those around him. He spread the power of goodwill to the extent that he became exceptional in human history (Mansouri, 2011).

In this context, it is necessary to raise the awareness of a new paradigm to all parents engaged in the philosophical concept of children's character education from an Islamic perspective. This new paradigm should emphasize the following: 1) Educate a child according to his or her psychological development. 2) Educate a child to build character and create a perfect adult. 3) Reinforce the urgency of reeducating parents as character builders. 4) Teach Islamic religious education. 5) Create educational facilities. 6) Create a favorable environment.

The material for Islamic character building is the character of Prophet Muhammad as a good example for humanity. The approach to character building from an Islamic perspective is systemic, ethical, personal, and contextual.

Character building in the Islamic world has not always enjoyed optimal results. From a philosophical perspective, character building has lacked the power of a philosophical foundation that is understood and followed by all parties. The purpose of Islamic education is to teach learners to face their futures independently, intelligently, and with a moral beauty, but in reality, moral issues have become the subject of public apprehension. In addressing such issues, the family plays a highly important role. The family environment provides the very first education for learners, so in Islamic countries, the strengthening of character building in the family

environment is highly needed as the basis for further education. The researcher has offered new ideas about the philosophical concept of parents' need for a greater awareness of educating character for children in the Muslim family environment, and in the modern global era, parents themselves may need reeducating according to the Islamic perspective.

Conclusion and Recommendations

In summary, this study concludes that parents must have the necessary skills to educate their children for them to have good personalities. Specifically, this study asserts that in Muslim families, character building in children aims to develop them into perfect adults who are pious (salihah), good servants of Allah, and responsible for their own thoughts and speech according to Islam. Such people are honorable, creative, tolerant, hardworking, responsible, trustworthy, respectful of nature, and affectionate to other human beings. They are also capable of making shared decisions and are disciplined, brave, efficient, effective, diligent, skillful, helpful, and consistent. In short, they are good citizens. In addition, parents play an important role in influencing a child to develop an Islamic character in later life. Parental knowledge about Islamic education theory, Islamic guidance and counseling, developmental psychology, education, and personality are especially important for the daily education activities in the family area.

Introduction

islamic perspectives

Character building in the Islamic world has does not been havingalways yield optimal results. It was proved by as evidenced by the widespread social behaviors fenomena appearance indicating behaviors having nothat indicate a lack of character in many Muslim countries.

Bandial (2011), for example, expressed in The Brunei Times explains that:

Statistics from the Royal Brunei Police Force (RBPF) showed that in 2009, 126 offenders aged 18 and under were arrested for a variety of offences including assault, theft and vandalism. The latest figures from RBPF also showed that between January and March 2010, 39 minors were arrested in a three-month period, a 19 per cent increase from the same time period in the previous year- (Bandial 2011).

Juvenile delinquency in India has become special an area of interest attention for of allvarious parties, both namely educators, parents, and the government. As befits youth in various Like with many countries in the world, the phenomenon of juvenile delinquency in India always appears with some varieties variations phenomenon. The Delata from India 's National Crime Records Bureau (NCRB), had explored by Overdorf, (2013) revealed a 40 percent rise in juvenile crime from 2001 to 2010, with a particular sharp jump in violence and crimes against women, including a more than doubling in rape by juveniles.

Juvenile crime rose 40 percent between 2001 and 2010, according to India's National Crime Records Bureau (NCRB). The spike in violence and crimes against women by young offenders has been even more dramatic. Rapes by juveniles have more than doubled in the same period, murder is up by a third and kidnappings of women and girls has grown nearly five times.(Overdorf 2013).

The problem of violent youth groups has escalated in Indonesia following economic recession, unemployment, and weakened state institutions. Young people have been affected by a lack of income and broken expectations. Consequently, youth gangs have emerged and sought to generate economic revenue for their members, as well as create identity and confidence. Drianyanto (2011) expresses <u>how</u> juvenile delinquency Indonesia led many underage has to children becoming smokers, using narcotics, engaging in casual sex, and committing crimes. He adds that the more violent activities, including murder, are often related to drugs and/or gangs, and he mentions media reports of female gangs clashing in high school (Drianyanto 2011).

(Drianyanto 2011).

Muslims could can feel a little proud, however, because; Egypt seemsed good in the implementation ofto have succeeded in character building. Souryal's (1992) A research, which was published in the publicized in International Journal of Comparative and Applied Criminal Justice and entitled Juvenile Delinquency in the Cross-Cultural Context: The Egyptian Experience, had been researched by Souryal (1992). He describes describes this. He expresses how; that juvenile delinquency in Egypt remains remarkably benign and relatively stable—and remarkably benign. This can be attributed He attributes this, to three main factors; (a) an orthodox religion-based value system where the daily moral behavior of juveniles in which is heavily influenced by liminitine attributed by the liminitine attributed b

In Turkey, whose most cohesive and lively population takes part in pilgrimage, apparently received character_building education issues attention through youth education (Bailleau & Cartuyvels, 2011). In the U.S.A., Lickona (1992) identified 10 signs of moral degradation that could damage the character of the nation. He states that a number of factors have adversely affected young people, and there is a new impetus to revive character education. These factors include poor parenting (even in unbroken families); inappropriate adult role models; mass media's poor parenting unbroken families); inappropriate adult role models; even mass media's of, and violence portrayal materialism, sex and peer, pressure. He adds that the effects this

educatorsions around the world were are starting to focus realize that on the study of the moral education needsed to be revived. Therewere Three considerations that underline the importance of education based or a moral education in the world the modern techniques and the study of the modern that in the study of the modern that is a start of the need for ethical values, morals, and manners today in modern times. (Nurul Zuriah, 2007, 10-11).

Malaysia was has also experienceding a lot ofmany problems related to character education. Jeremah (2012) explainsed that vViolent crime rates in Malaysia are reaching worrying levels. (http://thestar.com.my/metro/story.asp?file). IOn practiceal, Malaysia seemsed seriously aboutin strengthening the character education through Islamic education and moral education. Balakrishnan (2010) wrote states that mMoral eEducation is a compulsory formal subject in the Malaysian school system. It—This is taught to non-Muslim pupils, whilest the Muslim pupils are taught Islamic Education. The pupils study this subject from their first year one of primary/elementary school to form five in high school (about age 17), and it culminatinges with a formal centralized public examination conducted at the end of form five by the Examination Board of the Ministry of EMducation (Balakrishnan, 2010).

The general aim of moral education (ME) is to develop individuals with good characters, so they will be, responsible and able to contribute towards to harmony and stability in the nation, as well as global society. The main objectives are to enable pupils to (i+) understand and internalise internalize the noble values that are needednecessary for good character, (ii2) aware learn and accept the importance of harmony between man-people and the environment and strive to sustain it, (iii3) enhance understanding and cooperation by sustaining a peaceful and harmonious life in a democratic Malaysia, (iv4) develop mature thinking based on moral and spiritual values to be used in when making moral decisions and solving problems, (v5) develop a commitment to act morally, based on justice and altruism in line with the noble values of Malaysian society (Ministry of Education, 2000).

Based on the above descriptions above, of course, among parents who had pay more attention to the future of the coming generations are, certainly had a very high concemed about on the current condition of current child morality. Morals decadence hased occurred in Muslim countries. All of this, and it was is the responsibility of all Muslims in the world to correct this, especially parents in the as family as the educators, teachers as school educators in the school, and the other scholars as educators in the society.

The term "character education" is simply the current term for a millennia-old issueconcept. For our purposes here, we will define it as the deliberate development, usually in schools, of youth's young people's tendency and capacity to befor responsible, pro-social, and respectful democraticie citizensship in our society. Character education is necessarily by nature complex—i.—It truly is like rocket science. Developing a varied set of psychological character components of character (e.g., conscience, empathy, moral reasoning, values, moral identity, etc.) requires a diverse and multi-faceted implementation strategy. At its most molecular level, character education entails building a network of positive pro-social relationships (e.g., among students, among staff, and between staff and students, between staff and parents, between administrators and staff, and so on). At the a more macro level, it is-involves comprehensive school reform and entails encompasses all aspects of the a school's functioning, from its academic curricula to its disciplinarye policies, from its mission statement to its governance structures, to its mission statement, to the adult culture of the school, and so on- (Berkowitz, 2012).

Character (akhlaq) is a set of internal states, traits, qualities, and abilities that individuals' thought possess, leading them to behave without and deliberation developed hav<u>ing</u> into habits whose values <u>lay</u> in the teachings of Islam. It includes both inward qualities and outward human behavior, and it is based on the view that behaviors are closely related to the soul and its intentions.

Besides Aside from the home, school is another significant factor place in where character could can be inculcated is school (Izfanna & Hisyam, 2012).

Character education seeks to develop virtue, or —human excellence, —as the foundation of a purposeful, productive, and fulfilling life and a just, compassionate, and flourishing society. Character education takes deliberate steps to cultivate moral and intellectual virtues through every phase of school life, such as the—the example of set by adults, —the relationships among peers, the handling of discipline, the resolution of conflicts, the content of the curriculum, the instruction process of instruction, the rigor of academic standards, the environment of the school, the conduct of—in_extracurricular activities, and the involvement of parents. Everything that happens in the life of thea school is a form of character education, because everything affects character. (http://www.gobookee.net/character education)

Thomas Lickona (1992), author of *Educating for Character*, states:d that "Moral education is not a new idea. It is, in fact, as old as education itself. Down through history, in countries all over the world, education has had two great goals: to help young people become smart and to help them become good." Good character is not formed automatically; it is but rather developed over time through a sustained process of teaching, setting examples, learning, and practicinge. It is developed through (i.e., character education). The intentional deliberate teaching of good character is particularly important in today's society since because our the youth face many opportunities and dangers that were unbeknown to earlier generations. Character education includes encompasses a broad range of concepts, such as a positive school culture, moral education, just communities, caring school communities, social emotional learning, positive youth development, civic education, and service learning. All of these

Formatted: Font: Italic

approaches promote the intellectual, social, emotional, and ethical development of young people and encourage them to share a commitment, thus to helping young people become responsible, caring, and contributiveing citizens (Lickona, 1991).

Character <mark>b</mark>Building in the gGlobal eEra

In the current global era, Muslims need a strong handler, so they they were able tocan select and sort the many values that they were are offered a lot. In general, there were have been three educational focuses, which werenamely to build knowledge, skills, and character. The Eeducation in Muslim countries were has apparently been successful enough in building knowledge and skills. However, but it still fails to build people character. From Based on this situation, it can be said that comprehensively realizing actualization of the character education comprehensively in muslem Muslim countries was is needed. This shall should be oriented to the principles of strong Islamic philosophical foundation of Islamic principles, strong educational management, educational democracy and empowerment, the preparation of qualified and professional educational human resources preparation, and quality, as well as character—based education development.

The above new educational paradigm indicates that the responsibility for giving an education is no longer merely that of school leaders. In fact, control has been given back to the community in that schools and communities have the same responsibilities and deliver education together hand in hand. Character education is the intentional effort to develop in young people core ethical and performance values that are widely affirmed across all cultures. To be effective, character

Formatted: Font: Not Bold

Formatted: Font: Not Bold

education must include all <u>the</u> stakeholders in a school's community and must permeate <u>the</u> school's climate and curriculum. (DeRoche, 2000).

Azyumardi-Azra (2000) has been giving hishas put forward the thoughts, that Islamic education, either whether in school, in the family, and or in society, should be interconnected and harmoniously cooperate, as well as have be a common step in the educational process of students. All of these three things should complement each other and support each other in achieving the goals of an Islamic education that truly formsed individual students complete according to the teachings of Islam (Azra, 2000, 18).

Failed character development in the education of m Muslim countries has been caused by having noarisen due to a lack of an optimal focus. Josephson (2006) has writtenstates that the need for character education in the school settings becomes more apparent with the passing of each day. Young people are almost unanimously in saying that ethics and character are important on both a personal level and in business, but they express very cynical attitudes about whether a person can be ethical and still succeed. (Josephson, 2006).

When <u>reforming</u> character education in Muslim countries, important factor we need to consider is the need to build commitment within the Muslim community. Without a strong commitment to a_character_education program, we will have implementing it. The teaching of Islamic education should difficulties just focus theoretical aspects but also emphasize the practical on et application of Islamic knowledge (Tamuri 2013). teacher of Islamic education needs to educate and develop students' character by infusing them with knowledge, providing supportive conditions and environment, and then giving chances practice and form character (Izfanna & Hisyam, 2012). Character

development requires behavioral change as well as knowledge acquisition, and interpretation in the interpretation of these findings in neuroscience on how the brain learns and then incorporate of these findings into program design and instruction (Raymond L. Calabrese, Brian Roberts Roberts, 2002).

Muslims need to build an earnest commitment to conduct a worldwide-Islamic character education around the world. Departing Starting from the paradigm of thought Becker, Jim. Jobst, Renate. McKnight, Paul. Roberts, Barbara. Simmmons, Deborah. Campbell, Annette_et_al. (2012), which is contained embodied in the concept, entitled "the document Building Character Education in Your Community: A Resource Guide for Communities, ", then it is's time for Muslims around the world to promptly implement a macro-level in character—education movement. It should, begins with (a commitment to building and strengthening arei): A dDetermininge who must be involved necessary to gain the community is needed to begin the character—education initiative and (ii). B. dDetermininge the community is needs. Various ways to determine the These needs could be determined throughare: (i)1. fFocus groups, (ii). 2. sSurveys, and (iii). 3. oOne-on-one interviews. C. Build a coalition that includinges key community leaders could then be built by: 1. cConsidering using an existing network that focuseds on community needs. F and/or forming a new coalition with character education as its primary mission (Becker, Jim. Jobst, Renate. McKnight, Paul. Roberts, Barbara. Simmmons, Deborah. Campbell, Annette et al., 2012, 6).

In America, The Character Education Partnership (CEP) <u>is</u> a national organization for the advancement of character education. <u>It</u> provides the following eleven principles of character education:

Formatted: Font: Italic

Formatted: Font: Italic

- 1) 1. Effective character education promotes core ethical values as well as supportive performance values as the foundation of good character.
- 2) 2. Effective character education <u>comprehensively</u> defines <u>""</u>character" comprehensively to as includinge thinking, feeling, and behavinger.
- 3) 3. Effective character education uses a comprehensive, intentional, and proactive approach to character development.
- 4. Effective character education creates a caring school community.
- 5. Effective character education provides students with opportunities for moral action.
- 6) 6. Effective character education includes a meaningful and challenging academic curriculum that respects all learners, develops their character, and helps them to succeed.
- 7) 7.—Effective character education strives to develop students's' self-motivation.
- 8. Effective character education engages the school staff as a learning and moral community that shares responsibility for character education and attempts to adhere to the same core values that guide the education of the students.
- 9) 9. Effective character education fosters shared leadership and long-range support of the character education initiative.
- 10) 10. Effective character education engages families and community members as partners in the character-building effort.
- <u>11)</u>Effective character education assesses the character of the school, the school staff's functioning as character educators, and the extent to

roomates which students manifest good character. (Eleven Principles of Character Education, 2004).

These eleven principles provide guidance for local school districts as they begin to develop and or enhance—their character—education programs. The *Character Education Quality Standards* self-assessment tool will beis used in this study to quantify the overall effectiveness, or lack thereof, of a character—education program. Character education includes a broad range of concepts, such as a positive school culture, moral education, a just communityies, a caring school communities environment, social emotional learning, positive youth development, civic education, and service learning. All of these approaches—promote the intellectual, social, emotional, and ethical development of young people and share aexpress a commitment to help young people become responsible, caring, and contributing citizens (Lickona, 1991). But www.hich virtues are most important for a strong character? Here are ten that are recognized and taught by nearly all philosophical, religious, and cultural traditions; (i)1. wisdowisdom, (ii)m 2. justice, (iii) 3. fortitude, (iv)4. self-control, (v) 5. love, (vi) 6. positive attitude, (vii)e 7. hard work, (viii) 8. integrity, (ix)9. gratitude, and (x) 10. humility. (Lickona, 1991).

Character eEducation in from an Islamic perspectives.

The character education of learners becomes a task that must be done seriously, systematically, and in a programmed manner due to its interconnection with the lives of children. Kupperman (2005) states that character (or moral) education is "a complicated business" (Kupperman, 2005, p. 216). A character-education program needs to develop moral literacy in teachers and showcase effective methods for integrating moral literacy across existing curricula (Zdenek & Schochor, 2007). Character

education has existed since ancient times. The, but the main-primary tTask of an educator is to optimize this character education in order to succeed. The cCharacter_education movement in the United States, for example, has been there around since the first movement years of the 21st century, and this there is actually an awareness movement among educators, as revealed by Elkind D. & Sweet F. (2004) in his their article: Character education is not new. It was in fact included as an important objective for the first U.S. public schools. Today, it is even legislatively mMandated or at least encouraged in most states. In reality, tThe current movement is simply a reminder of education so long history of stressing core values—such as respect, integrity, and work hard work—to help students get become creative, capable people and good citizens. Character education provides effective solutions to ethical and academic issues that are of growing concern (Elkind & Sweet, 2004).

From the Islamic perspective, Aqidah can establish and oversee the actions and human behavior that stem from the formation of the self, the family, and community life. If people are aware of the responsibility of what must be done, they will not become involved in unhelpful, sinful behavior. The faith within themselves will yield positive results, because they will always feel the _of Allah, the most well-known human deeds. With beings tend to do good deeds in line with human Islamic . Islamic Aqidah enables human beings to think openly, oversee the future, and be optimistic about life. The nature of the here and now and what will come later makes human beings able to consider the future and take actions for the present and the future in a balanced manner. All actions, behaviors, and deeds are therefore confidently performed based on the principles of Aqidah, and acceptance of all Allah's revelations. This establishes a harmonious Formatted: Font: Italic

Formatted: Font: Italic

community and secures <u>it</u>. <u>This enforces tencourages</u> people to respect other people's rights, whether they be to respect rights of family members, neighbours right, guests, right, and other rights or whomever. This also educates human beings to mutually respect one <u>anamong</u> others and <u>be</u> mutually affectionate (<u>Fatmi</u>, <u>Hidayat</u>, <u>Bani</u>, <u>Huzairi</u>, <u>Bahti</u>, <u>Nabiroh</u>, <u>Ahmad</u>, <u>Jamil Fatmi</u>, <u>Hidayat</u>, <u>Huzairi</u>, <u>Bahti</u>, <u>& Ahmad</u>, 2010).

Islam views that manners, morality, and a religious soul education are as always being needed for children and learners and therefore are done totakes them seriously. Ibn MiskawayhIbn Maskawaih (n.d.) suggests that character is original and can be changed slowly or fastquickly. He rejects the opinion that character cannot be changed,. It is because if this it cannot be changed, the power or differentiation in power (tamyiz) and thinking (al 'aql) will not be unconsidered. Therefore, so all forms of norms, guidance, and education will have no benefits. Human beings will-would therefore become wild and uncontrolled (Maskawaih, Miskawayh-, n.d. 1423 H, 37 39). Changes of in human character have occur on several levels. This, as can be seen from in how children growth and development from the beginning birth. Among the children, there are those who some easily accept character improvement and education, those while others who reject these them, those who. These are often hardheaded, those who are covetous, those who areand envious of; and others. If such characteristics are ignoredant and are not corrected, children will tend to do as is and doact in accordance to with their his naturale waystendencies. Education makes prompts further thinking further throughabout that nature, so that these human beings shall will be educated. Ibn Maskawaih analogizes argues that the new-born babies are naturally good, not not cruel, and have nowithout sins. Their thinkings thoughts are clean like a blank sheet of paper-with no writings. In turnsSoon, however, they take are influenceds from by their environmenten vironment at the certain levels- (Jalaludin dan Said, -1994, 134)

Commented [NJ2]: This reference seems to be missing from bibliography.

When describing a method of education that is relevant to children, aAl Ghazali (1936) describes method of education relevant to children, that is, that of through-mentions practices or and habituation (al Ghazali 1936: 63). According to ibn-Maskawaih (n.d.), Shari'ah religion is a decisive factor for the a straight man character, which makes them because it accustoms peopleed to perform commendable deeds and which makes the soul ready to receive wisdom, so that people will be able to obtain can achieve happiness. (Maskawaih 1329, 175)

To Cehanginge the human character to be better needs better sistematicsystematic guidance and education. This will can be acievable achieved with knowledge of the human soul and knowledge an understanding of what, how, for what the human soul is was created for, including the its real aims of it, as well as the and its inherent power given. If this the soul is guided properly, human beings will reach the highfollow lofty and noble aimes (Maskawaih, n.d. 1329, 44). Therefore, religious rules and the human soul are the main foundations of children's character education. Children education must be done in accordance to the with religious rules for correcting children's characters. This is also true if If knowledge about the children soul is not consider included in the process of childhoodren education, however, the effort will be worthless. This concept is then developed mirrored in educational psychology by contemporary thinkers.

Methods

(1) Type of rResearch

This type of research was a study is descriptive-qualitative research, that was, a research on involves the data that was collected and expressed in the form of words and images and, words arranged in sentences, such as those the result of interviews between researchers and informants.

(2) Researcher<u>'</u>s <u>p</u>₽resence

The presence of the researcher becomes is the a measure of success or understanding of in several cases. The researcher acted, with the help of other people, as the main instruments in collecting data. In the qualitative research, the researcher or with the help of other people was the main instruments of collecting data. These was done by visiting respondents from people in Tulungagung. East Java. Indonesia. This research used a sampling techniques commonly employed for in qualitative research, which wasnamely purposive sampling, It is, which was implemented using the chimney technique. Data were first collected broadly and, then were narrowed down and sharpenned focused based on the basis of the research.

(3) Research sSites

Over an eight-month period, this research was conducted in three areas of Tulungagung, East Java, Indonesia: (i)1. Kendal Gondang Tulungagung, East Java Indonesia, (ii) 2. Kutoanyar, and (Tulungagung East Java Indonesia, iii)3. Mangunsari Kedungwaru Tulungagung, East Java, Indonesia. This research was done within 8 months.

Formatted: Heading 2, Left, Add space between paragraphs of the same style

(4) Sources of Data

The sources of data were "subjects from where data were obtained". The sources of data were identified classified into 3 coveringthree groups: informants, documents, and places of evidence. In qualitative research, data sources are also divided by into two groups, which arenamely primary and secondary data. Those The primary data were obtained directly from the main subjects who were parents in Tulungagung, East Java, Indonesia, while the secondary data had already been called primary data and those obtained from by other parties are called secondary data. The rRoles and functions of these two data were mutually complementary and supportive.

3.5. Data-c-Collection t-Fechniques

The techniques of for the dData collection used dData triangulation, which was data collection techniques involves combining various techniques methods of data collection from existing research subjects, which and in this case included: (a) in-depth interviews, (b) participant observation, and (c) documentation.

3.6. Data-a-Analysis t-Fechniques

The techniques data involved working with for analysis data, organizing data, sorting them into units that could be managed, synthesizing them, and then searching for what was important and deciding what use for others. the data of At this stage, analysis performed and utilized in such a way to successfully derive the truths that could be used to answer the questions and issues raised in the study. An inductive method was used manage qualitative data this study. The inductive method allows for set of specific facts to inform **Formatted:** Heading 2, Left, Add space between paragraphs of the same style

Formatted: Heading 2, Left, Add space between paragraphs of the same style

generalizations that have with common properties. This line of thought was has been used to obtain an opinion consisting of several special opinions. By connecting these opinions, the researchers made generalization generalized them.

3.7. Checking the vValidity of dData

The validity of the data in this study was determined using the criteria of credibility (degree of confidence). The credibility of the data was intended to prove that the data accorded with the reality that exists in the study. To establish the validity of the data, the researcher used the inspection technique as follows:_1) The extended research participation allowed an increased degree of confidence in the data collected. With extended participation, the researcher could examine the accuracy of information introduced by distortion and build confidence in the subject. Therefore, a limited participation performed was not in short time. Instead, the researcher extended participation_ that place study the took on background. 2) Perseverance observations meant that the researchers characteristics and elements in situations that were very relevant to the issue being studied and then concentrated on such matters in detail. 3) Triangulation helped data checking comparing involved significant source of triangulation to compare and check that the degree of confidence information gained over time with different tools. This involved (a) comparing the observed data with the interview data; (b) comparing what people say in public with what they say in private; (c) comparing the state and perspective of **Formatted:** Heading 2, Left, Add space between paragraphs of the same style

someone with different opinions and the views of the pPrincipal, tTeachers, sStudents, gGuardians, and cChairman of the Board of Education; and the gChairman of the gChairman of the Board of Education; and the gChairman of the g

Results

According the results of Based on the dData collectedion through in-depth interviews, participant observation, and documentation, the researcher find belowarrived at the findings below-1:

(1)

(2) Parents Educate teaching a gGood Personality character to their children

Parents need to have the optimal skills that can be used to educate their children about having in order to have a good personalitycharacter. It is therefore important for parents to have a mastery in of educational methodology, mastery of and the appropriate materials, as well as the ability to provide guidance, and direction, ands well as motivation were important to be owned by each parent. Every Pparents first needs to look inwards and decide, whether he himself has had athey themselves are mature ity in their his lives fe. If they found find they are not, that they do not have it, then they need to carry outengage in self-education through by searching seeking out information from people who have with the capacity to educate young manhoodpeople. It was becouse, because parents they themselves should have a mature manhood character.

When educating themselves, parents should understand the indicators of personal maturity

such as having healthy thoughts and being able to be independent rather than relying on other people. They should be able to make decisions about

Formatted: Heading 1, After: 0 cm, Pattern: Clear

Formatted: Heading 2, Left, Add space between paragraphs of the same style, No bullets or numbering

their attitudes to life without hesitation with while also consideringation othersof and accepting their other views. They are should be able to be responsible for their attitudes, behaviors, and actions. They can and be able to accept, give, and feel the friendship and real affection. They are What is more, a mature person is able to balance their emotion and intelleintelligence ctuality in all aspects of physical and spiritual fulfillment and manifested it in all his or her behavior. They are able to Indeed, mature people can balance their personal needs and with the demands of society craumedeing and their obligation to God/AlkhS.W.Tyleichosendeity and to emying outservetheir social milieu. They shall should have associal consince of they are the latent to be communicated the analysis of the control of

Our personalitiesy is the result of the from an interaction between our genes and our social environments. Because of this interaction, then each, so every person is unique, each person has with their his or her own personality differences one among others. If in the case of Even when individuals who have a some of the same similar genetic makeups or the same and social environment, the this interaction can produces—a widely different variation in personalitiesy. Ahmad (2012) in International Journal of Islamic Thougt, entitled Generic Skills from Qur'anic Perspective, states that the significance of personality development is to lies in producinge a well-balanced person, physically, spiritually, and mentally, One who is used to, so he or she can faceing any challenges and difficulty in any circumstances. Furthermore, according in line with Mahmud (2000), Ahmad (2012) explains that the balanced growth of an individual should develop occur at within the physical, mental, and spiritual being of the individual. Therefore, personality can therefore be developed through methods roomates—that correspond to those aspects, namely spiritual training (tarbiyah fikriyyah)—(Ahmad, 2012—50).

In accordance with the demands of the<u>se fast-moving</u> times, parents need reeducating in the broadest sense. Guidance and counseling, the delivery of

information, <u>and/or training</u> is often <u>needed</u> for parents. Both developed and developing countries common<u>ly implement</u> non-formal <u>adult</u> education programs.

or adult education known as adult education

(3) The gGoal of children character building for children

The gGoal of children character building for children in Muslim families was is to make the Muslim families' children to be shape them into perfect manadults who are, pious (and salihah), good servants of Allah, and leaders who are responsible in for their own thoughts and speech based on Islam. They are should also be honourablehonorable, creative, tolerant, hard workhardworkinger, responsible, and trustworthy, respectful of nature lover, and affectionate to other human beings. They are also should also be capable to of makinge shared decisions and be, disciplineds, brave, efficient, effective, diligent and skillful, helpful, and consistent, and. In other words, they should be good citizens.

Maturity basic foundation an aim of education, and education succeed. it must be administered professional adult, because if they themselves have chosen norms and values and act with their own responsibility, their students will also become self-sufficient citizens when they adults. **become** accept that the main goal of Islam is the establishment of a moral and character education both men can develop people, and women, with clean willpower, the right ideals, and a high degree of morality. Such people know the meaning of duty and respect human rights. They know the difference between good bad and choose to avoid

reprehensible act because <u>it they know it</u> would be disgraceful, <u>and instead</u> remembering <u>God (Allah S.W.T) the supreme</u> being in <u>every everything job</u> they do (al-Abrasyi, 1970, 103).

In the modern context—of today's era, efforts to educate children need to be announced conducted in thea steady and creative in character education children—environment of the Muslim family. Chauhan (1979) in Advanced Educational Psichology, asserts theed, characteristics of a creative child: 1)1. Ceourageous in convictions: The A creative child shows strong conviction in his or her beliefs and values. Heean go, going beyond socially conformist behavior. 2): Curious: AThe creative child is eurious eager to know—learn more and more about his environment. 3): Independent—in—judgment: AThe creative child can take—judge crucial matters independently judgment—in—crucial matters. 4): Independent thinking: He—isA—creative child thinks interpretative thinking the him first behaviorable that the control of problems for its types. S) Accepted his behaviorable to the routine easily established solutions to a of problems and He is not always conformist. 8): Accepted his way. Willing to take risks: Helpenisk taking apacity. 9) Visionary. The A creative child has conformed as solutions to a of problems and He is not always conformist. 8): Accepted his way. Willing to take risks: Helpenisk taking apacity. 9) Visionary. The A creative child has conformed as solutions to a of problems and He is not always conformist. 8): Accepted his way.

In Muslim families, <u>for parents</u> as educators in the <u>scope of the character of his family</u>, it <u>was is necessary</u> to understand the concepts, tasks, functions, and properties of Muslim educators, and <u>how they</u> seek <u>their to develop</u> children <u>to beinto</u> creative people in his life. According to Tafsir (1992), <u>Islamic</u> educators in <u>Islam</u> are <u>the ones</u> responsible for the developingment of students by <u>pursuing the development of achieving</u> their full potential of the <u>students</u>, <u>both whether it be their affective potential</u>, cognitive <u>potential</u>, and <u>or the potential of psychomotor potential</u>. (Tafsir, 1992), <u>74).</u>

(4) The rRole of pParents in cCharacter bBuilding

Related In relation to children character building in the children in the muslim muslim familiesy, parents have play important position in order toroles in influencing their a children to an Islamic good characters in his life. Parental knowledge about the theory of Islamic education, Islamic guidance and counseling, developmental psychology, education, and personality; once owned by the parents is toois very important, especially in the daily activity of education activities of ain family area.

Ric Nidnelliving to Indian and Mineral Solid Company Library Sensitive Methods in the Methods in

Nichols' theory insists second factor family influences) affects and other social greatly child's ability. As it is effectively an informal educational institution, the family offers the first learning environment to child. this environment, children receive their first guidance from their parents. reality, Islam positions Muhammad the last prophet and his apostles as exemplary Muslims for character education in children. Prophet Muhammad (peace and blessings be upon him) is an ideal role model for all of humanity. Among his various outstanding virtues and characteristics, he was an extraordinary husband, a perfect father, and a unique grandfather. He was also a great statesman, judge, and spiritual leader. His most distinctive quality, however, was the fact that he brought blessings to all in both words and deeds. He infused justice, love, and dignity in all those around him. He spread the power of brotherhoodgoodwill to the extent that it-he became exceptional in human history (Mansouri, 2011).

In this context, it is necessary to raise the awareness of the a new spirit paradigm to all the parents who are related to implementation of engaged in the philosophical concept of children's character education in from an Islamic perspective. This new paradigm should are to emphasizes the following matters, these are: 1). Enducate a children according to child his or her psychological development; 2). Educate the a child to build character to be and create a perfect manadult; 3). Strengthen Reinforce the urgency of re-educating on of parents as educators of character builders; 4). Educate Teach Islamic relegious education. 5). Fulfill Create educational vefacilities. 6). Create a good-favorable environment.

The mMaterials of for Islamic character building is the characters of Pprophet Muhammad (S.A.W) as a good example for humankindhumanity. The approach of to character building in from an Iislamic perspective are is systemic, ethical, personal, and contextual approach.

Discussion

Character building in the Islamic world has not <u>always enjoyed</u> optimal results. From a philosophical perspective, character building has lacked the power of a philosophical foundation <u>that is</u> understood and <u>followed</u> by all parties. The purpose of Islamic education <u>is</u> to <u>teach</u> learners to face their futures independently, intelligently, and with <u>a</u> moral beauty, but in <u>reality</u>, moral issues have become the <u>subject of</u> public apprehension. <u>In addressing</u> such issues, the family <u>plays a highly important role</u>. The family environment <u>provides</u> the <u>very</u> first

Formatted: Heading 1, Left, Pattern: Clear

and primary education for learners; therefore, so in the Islamic countries, reactualization the strengthening of character building in the family environment as the basis of education has been is highly needed as the basis for further education. The researcher has offered new ideas about the philosophical concept of the need for parents' need for a greater macro awareness movement toof educating e character for children eharacter in the Muslim family environment, and in the modern global era, through parents themselves may need re-educating ion oriented-according to the Islamic perspective.

Conclusion and Recommendations

This study concludes that:

- (1) Parents need to<u>must</u> have the optimal necessary skills that can be used to educate their children in order to for them to have a good personalities.y
- (2) In Muslim families, The Goal of children character building in children in Muslim families is aims to make the Muslim families' childrendevelop them to beinto perfect manadults who, are pious (and salihah), good servants of Allah, leaders and who are responsible in for their own thoughts and speech based according toon Islam. They Such people are honourablehonorable, creative, tolerant, hard—workingker, responsible, and trustworthy, respectful of nature lover, and affectionate to other human beings. They are also capable ofto makinge shared decisions and are, disciplineds, brave, efficient, effective, diligent, and skillful, helpful, and consistent, and. In short, they are good citizens.
- (3) Parents <u>play an important role in influencing</u> a child to <u>develop</u> an Islamic character in <u>later</u> life. Parental knowledge about Islamic education theory, Islamic guidance and counseling, developmental psychology, education and personality <u>are</u> especially important for

Formatted: Heading 1, Left, Pattern: Clear

the daily education activities in the family area.
