

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

After conducting the research and analyzing the data, the researcher draws a conclusion as follows:

There was no significant correlation between students' frequency on watching English movie with their translation skill of English department at IAIN Tulungagung in academic year 2016/2017 by seeing the result of data calculation in chapter IV by using SPSS 16.0 program. So, based on the result of calculation, the researcher concluded if frequency of watching English movie is not give significant effect to translation skill.

B. Suggestion

Based on the conclusion above, the researcher gave some suggestion as follows:

a. English teachers

Because this research show if there is no significant correlation between students' frequency of watching English movie and translation skill. So, the teacher must be careful to choose or use media to teaching especially for translation skill. Teacher must choose media that can improve students' skill of translation.

b. English students

Students can improve their translation skill using other media except English movie. Or they can still watch English movie to their other skill, for

example grammar. Because watching English movie is not recommended to improve their translation skill based on the result of this research.

c. The future researchers

To the next researcher, the researcher hope this researcher can give benefit. They also can use this research for source for their research. The researcher also hope for next researcher can develop this researcher to wider area and better result.
