

CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter, the researcher presents the conclusion and suggestion based on research finding and the discussion presented in the previous chapter.

A. Conclusion

Based on the finding and discussion described in the previous chapter, the researcher concluded that there were still many students who had a low level of understanding in the TOEP test, this was evidenced by the number of students who got a TOEP score less than the minimum value (400). From the 279 students, there are 240 students who have a TOEP score less than the minimum value (400), while for students who have a TOEP score more than the minimum value (400), there are 39 students. It can be concluded that many students still do not understand the TOEP test or the English Proficiency of the Islamic Banking of IAIN Tulungagung is was poor because many students have low understanding and low scores.

B. Suggestion

After analyzing the data obtained from the questionnaire, the researchers would like to convey some of their suggestions as follows:

1. For students, continuously learning about English is not a disadvantage, especially for the material in the TOEP test. Because TOEP is also important in today's world of work.

2. For lecturers and supervisors, lecturers and supervisors should pay attention to their students in the English language learning process, especially materials related to the TOEP test such as grammar, structure and written expression and listening.
3. For further researchers, make this research a reference about the difficulties of students in the TOEP test to make new research about it but in a different discussion.
