CHAPTER V

CONCLUSION AND SUGGESTION

This chapter presents two points, conclusion and suggestion. The conclusion is based on the result of data analysis that has been discussed in the previous chapters. The suggestion may be useful for the teachers, the students and the researcher when they want to teach by using reciprocal teaching in teaching reading comprehension

A. Conclusion

After conducting the research, the researcher concluded that as follows:

- 1. The students' reading comprehension before being taught by using reciprocal teaching is average because the mean of the pre-test is 78.72 and the percentage of the percentage score in very good criteria is 64.1%.
- 2. The students' reading comprehension after being taught by using reciprocal teaching is very good because the mean of the post-test is 84.38 and the percentage score in very good criteria is 84.6%
- 3. Based on the calculation T-tes in SPSS 16.0, the result of t_{count} is (-3.488) and t_{table} with significant level 0.05 is (1.685). It means that t_{count} is higher than t_{table} -3.488>1.685, so the alternative hypothesis (Ha) is accepted and the null hypothesis (Ho) is rejected. It means there is significant difference achievement between students' reading comprehension before and after being taught by using reciprocal teaching.

B. Suggestion

The suggestions that can be acquired from this research are:

1. For the students

Reciprocal teaching can encourage them to learn English especially in learning reading. So, they can enhance their reading comprehension and find their comprehension in reading by four activities immediately.

2. For the teacher

The researcher recommended for teacher in teaching reading. Not only in teaching reading. Teacher can know how far the students' comprehension in reading and teacher can improve their comprehension in teaching English for next material.

3. For other researcher

The researcher recommended for researcher to conduct the research about reciprocal teaching in other school and the other grade to verify and generalize the result of finding. Because this research was successful in tenth grade of MAN 2 Tulungagung.
