

CHAPTER V

CONCLUSION AND SUGGESTION

This was the final chapter of this research dealing with the conclusion and the suggestion that might be able to be taken as the concern to the future research.

A. Conclusion

There were obviously some main points related to the finding covered the students' grammar mastery as well as their achievement in writing descriptive text and the correlation coefficient obtained from the conducted research. There is positive and significant correlation between students' grammar mastery and their achievement in writing descriptive text. Based on the data analyzed by using *Bivariate* Correlation (SPSS), the researcher found that the coefficient correlation was 0.804. Therefore the correlation of students' grammar mastery and their achievement in writing descriptive text is considered significant and very high correlation as the coefficient correlation by interpretation correlation table.

The finding of this research indicates that the null hypothesis is rejected, automatically alternative hypothesis is accepted and thus the investigation confirms that there is significant correlation between students' grammar mastery and their achievement in writing descriptive text. This research reveal that the students' grammar mastery can help them increase their achievement in writing descriptive text. Students who are good in grammar they also be good in writing

also as it can be seen from their grammar and writing score. It showed it was easier for some students who understood grammar well to write a descriptive paragraph better rather than those students who were lack of grammar knowledge, they will trouble to write descriptive text correctly.

B. Suggestion

Hopefully if the future researcher wants to conduct the next research that still related to the correlation between grammar and writing descriptive text can be better, more clear and more detail. It means that the future researcher should not focus on one skill and the scope of subject as the sample can be larger than this research. Because in this research, the researcher limit the number students as the sample. The researcher just use one class that consist of 37 students as the sample. In addition, the next research can find out the latest theory to make the research strong. So, the research can show the different result and can be perfect than previous research.
