Then, the results of the questionnaire were analyzed using data instrument tests, namely validity tests and reliability tests, classical assumption tests, namely normality tests, multicollinearity tests and heteroscedasticity tests, and using multiple linear regression tests and hypothesis tests, namely t-tests, f-tests and determination coefficient tests ( $R^2$ ).

The test results show that simultaneously the variables of convenience, efficiency and security risk have a positive and significant effect on the interest of Islamic banking students of UIN Sayyid Ali Rahmatullah Tulungagung in using the cardless withdrawal feature on BSI Mobile. While partially the convenience variable has a positive and significant effect on the interest of Islamic banking students in using the cardless withdrawal feature on BSI Mobile. While partially the efficiency variable has a positive and significant effect on the interest of Islamic banking students in using the cardless withdrawal feature on BSI Mobile.
