

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

This chapter presents the conclusion of the research and the suggestion for the future research after the researcher analyses and interprets the provided data from the previous chapter. The conclusion is covered from the statement of the research problems while the suggestion is intended to give information to the next researchers who are interested in conducting the similar research

A. Conclusion

In this research that conducted in May until June 2017 at four instagram users, they are Zaskia Adya Mecca, Chelsea Olivia, RAJeans online shop and Nathashawilona online shop, the researcher got some data which is very important to finish this thesis, they :

1. The instagram comment users performed more face threatening act rather than performed politeness strategy. The instagram comment users by male only performed 14 times politeness strategy in order to minimize his/her face threatening act, and 12 times for female.

2. The instagram comment users are commonly performed FTA towards addressees which is done 5 times for male, then 9 times for female.

3. Not all their face threatening acts were minimized by his/her both positive and negative politeness strategy. From 40 data which were containing face threatening acts, only some data which were minimized by positive and negative politeness strategy.

Therefore, instagram comment users less concerned on how to make the communication can run well and smoothly. They only concerned on how they can

commenting status although they threaten others' face and affected their communication to run well and smoothly.

B. Suggestion

Based on the conclusion above, the researcher suggests to

1. The Readers

The writer expects that this study can help the readers, especially English Department Students in understanding the concept of Brown and Levinson about Face Threatening Acts and Politeness Strategy performed in commenting status on instagram.

2. Linguistics students

The result of this research shows something different from the previous study related to the FTA and Politeness strategy which is not only occurred in daily communication on the society but also in cyber world. It indicates that the use of politeness strategies in people's communication have been slightly shifted since some form of culture that affect the use of language has also faded in society. Thus it is expected for the linguistic students to be more sensitive toward the phenomenon so they can dig more information related to the FTA and Politeness strategy.

3. The next researchers,

The researcher suggests to conduct the other research to repair the research, because this research has the weakness that is the lack of theory that is used to analyze the problems of research since the researcher used the theory only by Brown and Levinson. Hence, the results of analysis are also limited. It is recommended for the

future researchers especially who are interested in the same topic to try to use more than one theory to cover the results of analysis wider and more challenge.
